The Fosfor Decision Cloud: Everything you need to make better business decisions

Unify the components of your data stack into a modern decision stack, built to amplify business outcomes
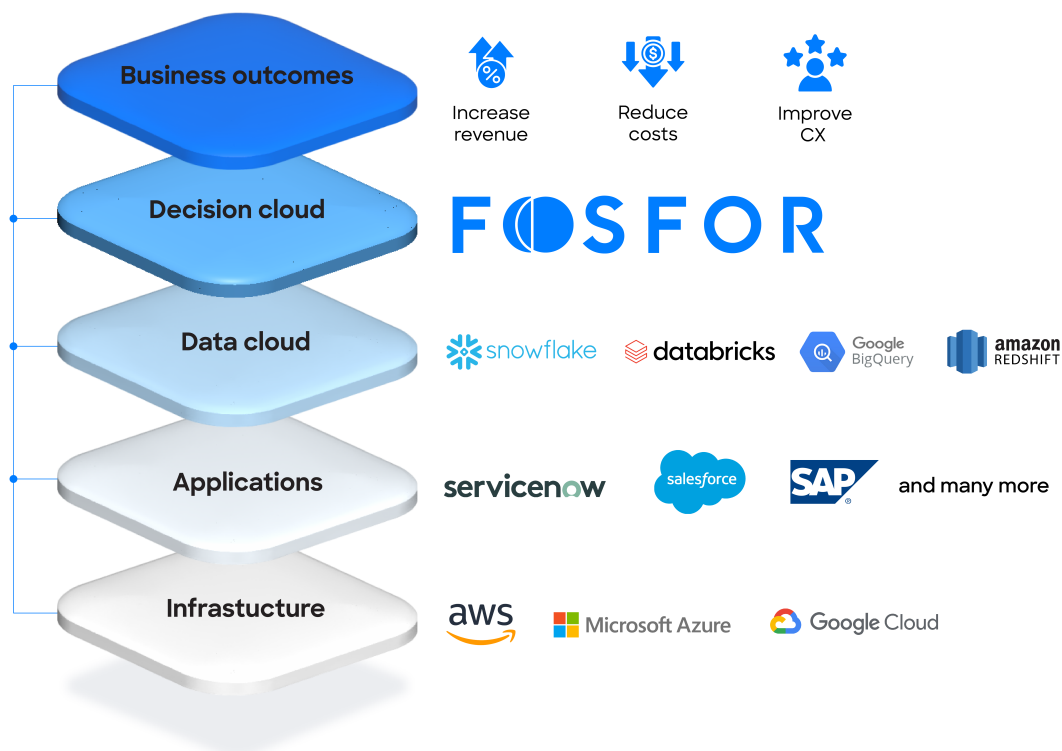

Accelerating decision making for the best business outcomes

Enterprises of all sizes are investing in innovative data tools and solutions to drive organization-wide analytics agility and expedite their data-to-decisions journey to achieve the most favorable business outcomes. However, such data investments are often disconnected from one another and yield unsatisfactory ROI.

The Fosfor Decision Cloud is a connected fabric that enhances the value of your data and powers scalable business-outcome-focused decisions.

Unifying and amplifying the components of the modern data stack

The Fosfor Decision Cloud optimizes operations across the data value chain by unifying all the components of the modern data stack. It amplifies the capabilities of the various elements in the data cloud, application, and data infrastructure layers through their effective integration and simplifies how organizations interact with their data.

Transform your curiosity into business outcomes

The Fosfor Decision Cloud empowers users to organize data, build impactful AI applications, and explore their curiosity to uncover new insights and make more outcome-focused business decisions in real-time.

A single, connected platform

The Decision Cloud provides a comprehensive platform for your journey. You can curate data, generate actionable insights, and utilize insights for effective decision-making — all in one place.

End-to-end security user access

Implement role-based access control for improved governance and security, with access and permissions tailored for user personas to strengthen authentication and authorization.

Robust ingestion and consumption options

Ingest data from virtually any source with 400+ connectors. Deliver insights wherever they are needed via FDC's composable architecture. Access your insights on the go via iOS and Android mobile apps.

Accelerate the data-to-decisions lifecycle

Leverage a GenAI copilot to guide you on your journey, assist with tasks like code generation and data story curation, and improve productivity from data curation to insight generation.

The Decision Cloud consists of three unique modules that help enterprises solve various business challenges across their data-to-decisions journey.

The Data Designer

The Fosfor Decision Cloud's data engineering module enables the effortless curation of your organization's data. It streamlines the integration of data from diverse sources and helps build modular, cloud-agnostic, and reliable data transformation pipelines at speed and scale.

The Insight Designer

The Fosfor Decision Cloud's enterprise AI platform enhances the data-to-decisions journey by accelerating the preparation, building, training, and deployment of high-quality ML models and enabling the timely detection of patterns and trends.

The Decision Designer

The Fosfor Decision Cloud's AI-powered Decision Intelligence module allows you to leverage the power of AI to explore your data to get instant answers, get alerted to interesting changes in your data, and access your insights anywhere, enabling more timely, impactful outcomes.
